

The SHA-256 and md5 hashes for verification are below:

The Above screenshot verifies the image file "LiveImage.ad1-5"

The Above screenshot verifies the memcapture.ad1 image file.

The screenshot below shows the results of the magnet IEF tool. It looks like the subject visits some questionable sites for his “alone time”. It also looks like the subject downloaded and used skype recently. A deeper investigative search than what I have done should be done.

The screenshot displays the NDG ForensicsLab4_104 web interface. The browser address bar shows a secure connection to <https://ndg.cise.ufl.edu/lab.cgi>. The page header includes the NDG logo and navigation links for Home, Reservation, and a user profile for 'krineer'. The main content area shows the 'ForensicsLab4_104 > Reservation 1674 > Lab 04' path. A 'Time Remaining' widget indicates 0 hours and 42 minutes. Below this, there are tabs for Topology, Content, Status, and Forensics Laptop. The central window is titled 'IEF Report Viewer v6.12.0.7538 - Examiner Mode - Case: Not entered'. It features a menu bar (File, Edit, Tools, Go To, Licensing, Help) and a search bar. The left sidebar lists 'Recovered Artifacts' with categories like IEF Refined Results, Media, Web Related, and Operating System, each with a count. The main pane displays a table of recovered artifacts, showing columns for #, URL, User Agent, Source, Located At, and Evidence. The table lists 7 items, all from 'MEMCAPTURE.AD1 - ...' with various file offsets. The bottom of the interface includes a status bar with icons for Alerts, Bookmarks, Chat Threading, Filter, Search, Timeline, and World Map. The Windows taskbar at the bottom shows the system clock as 5:34 PM on 9/27/2017.
